CARE AND MAINTENANCE FOR MELAMINE DOORS & PANELS

Your **FlexiPanel** melamine doors and panels are manufactured in Australia utilising the highest quality materials designed to give the consumer many years of satisfaction with our product. The doors and panels are made using Medium Resistant Medium Density Fibreboard or MR MDF and similar to any wood based products, cannot be made entirely waterproof.

GENERAL CARE

Spills

With any accidental spills on doors or panels, immediate action is always required. Wipe them to avoid the surfaces from coming into contact with high levels of moisture.

While avoiding moisture contact to the product, it is also vitally important not to expose doors and panels to humidity or steam.

Stains

If stains are not removed by a soft cloth dampened with warm water, try using windex or methylated spirits on a soft cloth. You may also use a mild household spray cleaner with a soft cloth and avoid heavy application and rubbing too excessively. Always read the recommendations on the cleaning products prior to use.

Streaks

Marks similar to streaks may occur on the surface after cleaning, particularly in the darker colours. If this has happened, use a soft cloth with windex, once again, not pressing too hard.

Do NOT use

It is extremely important **NOT** to use the following products on doors and panels: abrasive cleaners, scouring pads, highly acidic or caustic cleaners, turpentine, solvents or acetone.
