CARE AND INSTRUCTION SHEET

Routered Doors for 2 Pac (Raw MDF)

FlexiRoute Raw Routered Doors and Panels manufactured by **FlexCorp** are machined in our modern plant utilising Australian made Moisture Resistant Medium Density Fibre board (MR MDF).

These products have been routed exposing softer inner fibre of the board and therefore, it is vital the following steps are taken to care for your investment.

Do:

- Upon receiving these Doors and Panels, an inspection for quality must occur.
- If there are any irregularities, they must be reported to FlexiPress within 48 hours.
- Have the products primed and painted by a professional painter quickly.
- Instruct your painter to store the products out of the harmful weather conditions.
- Instruct your painter to store the products flat and even to avoid bowing.
- Regularly inspect the doors and panels at each interval.
- Prime and paint with 2 pac paint only.

Don't:

- Lean doors and panels on an angle against walls as bowing may occur.
- Store doors and panels expecting a lengthy delay prior to priming and painting.
- Expose the products to wind, sun, rain or high humidity.
- Paint doors and panels with water based paints.
- Store the products unevenly causing the doors and panels to bow.
